

Teacher: Putri Wanna

Subject/Grade Level: 2, Learning Support, Writing

Observer: Kandace Law

Date and Time of Observation: 14-January-2026; 8:30am

Teacher Professional Goals: Building community partnership by leading a parent workshop. Provide LS support to PYP teachers by conducting a teacher-led session.

Teacher Observations

- Ms. Wanna provides an individualized pull out intervention for a student directed toward a clear goal in writing.
- There is clearly a routine and rapport established between Ms. Wanna and the student, which has created predictability and a sense of emotional safety within the space and session.
- Ms. Wanna checked in on the student's current emotional state and reviewed the purpose/student goal. This helped the student understand the "why" behind their time together, which supports student motivation and empowerment.
- Ms. Wanna provides an intervention using writing stamina strategies, use of timer, and frequent breaks. She also used a wipe on/wipe off board as needed when she needed to write out a visual reference for the student.
- In between academic and intervention specific focus, Ms. Wanna and the student giggled and chatted about topics that interested the student, showing the student that Ms. Wanna knows and cares about him. This helps with creating engagement among the student during intervention focus time.
- Ms. Wanna used learning profile verbiage to reinforce the student's actions, such as "Great job! You were using your thinking skills"

Environmental Observations: This is a pull-out intervention that takes place in a private, individualized office. There is a small table in about the center of the room in which the intervention takes place. There are 2 staff desks and multiple shelving units, with an assortment of resources at the ready and to use as needed. Ms. Wanna has the intervention table prepared and organized with resources for the student intervention prior to the session.

The following elements of teaching and learning were observed during this lesson:

○ Learning driven by inquiry	○ Collaborative learning
○ A LP attribute was explicitly developed	○ Differentiated learning
○ Learning focused on conceptual understanding	○ Students developed as caring global citizens
○ Students given agency to guide their learning	○ Learning explicitly developed an ATL skill

Staff Feedback & Reflection

Today, I successfully supported my student in achieving his identified learning goals. Evidence of the student's understanding of the intended learning objective was gathered by prompting him at the beginning of the intervention to articulate his goal for the session. This goal reminder helped reinforce clarity and focus. Furthermore, data collected during the intervention indicated that the student met his learning target by independently producing a total of five sentences within a ten-minute timeframe across two sessions.

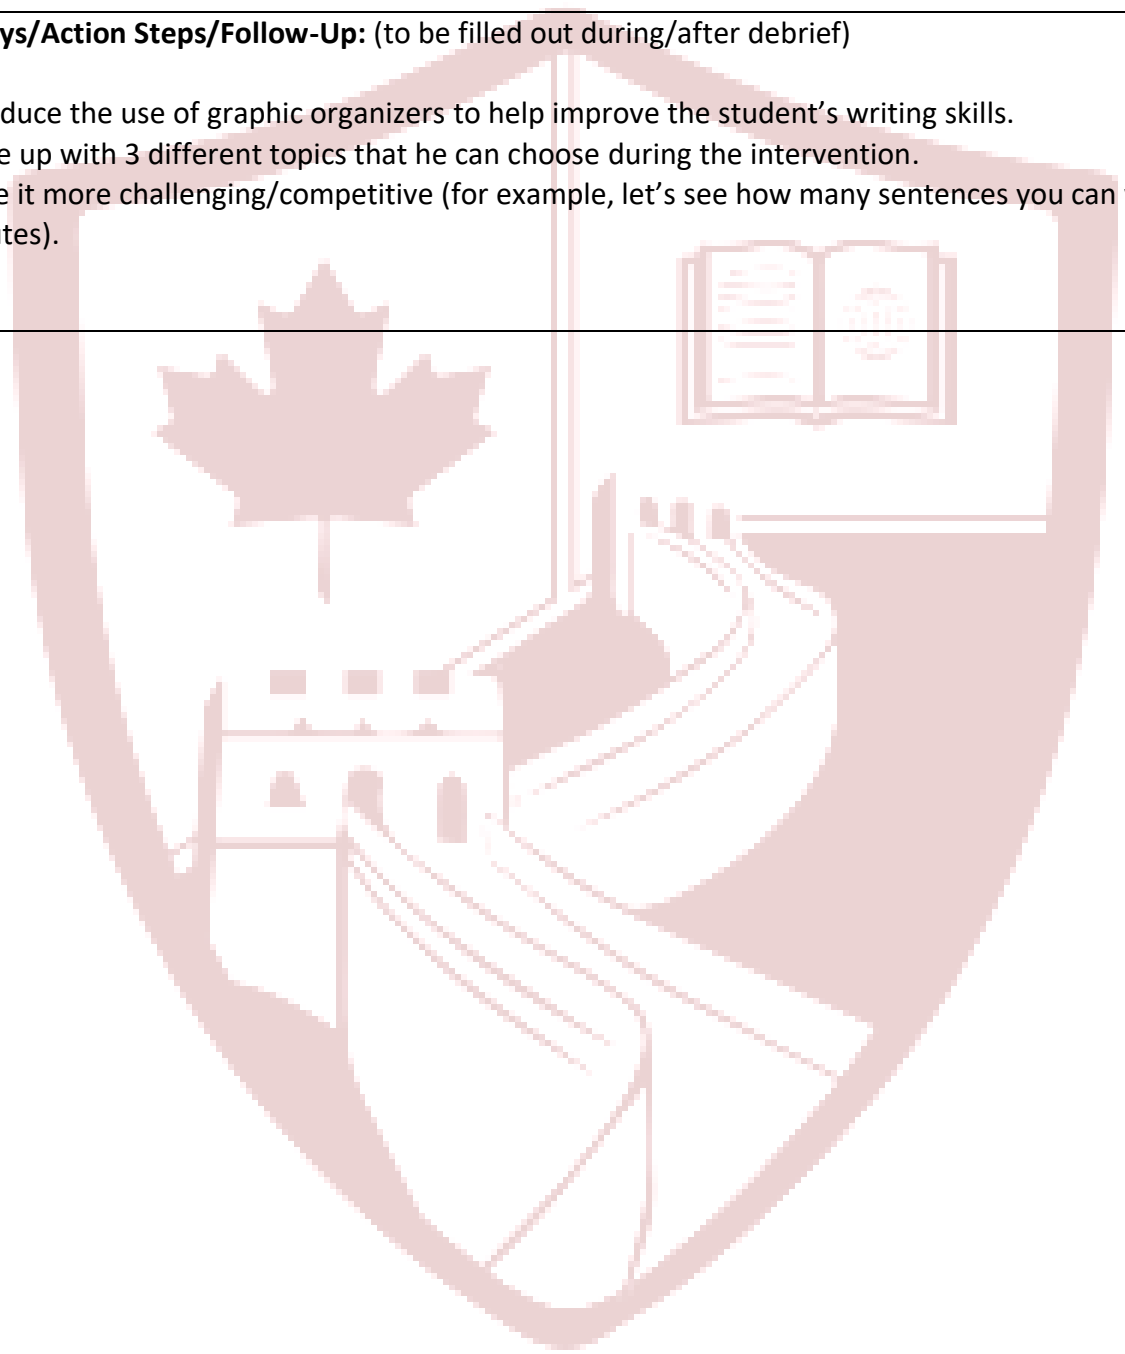

Moving forward, I plan to further develop the student's self-reflection skills by encouraging him to review and revise his own work. This process will involve not only verbal reflection, which we did during the intervention, but also making written corrections or adjustments where necessary, thereby strengthening his metacognitive awareness and ownership of learning.

In addition, I aim to extend the student's learning by encouraging him to produce additional sentences when time permits, providing appropriate challenge and promoting perseverance. Positive reinforcement

strategies, such as verbal praise or small incentives, will be used to motivate the student, particularly when he exceeds his stated learning goals, in this case by creating more than five sentences.

Takeaways/Action Steps/Follow-Up: (to be filled out during/after debrief)

- Introduce the use of graphic organizers to help improve the student's writing skills.
- Come up with 3 different topics that he can choose during the intervention.
- Make it more challenging/competitive (for example, let's see how many sentences you can write in 5 minutes).
