

Teacher: Putri Wanna

Subject/Grade Level: Learning Support, grade 2 small math group

Observer: Kandace Law

Date and Time of Observation: Monday, 23-Oct-2023

Teacher Professional Goals: Literacy and Math Skills to support LPYP Students

Teacher Observations	Student Observations
Ms. Wanna was organized and prepared with all supplies and materials ready for the students. The math manipulatives were laid out on the table, and created an engaging math game for the students. Ms. Wanna sits at the table with the students. The teacher kept the pace appropriate for the students, and fast enough to maintain engagement. Ms. Wanna used a backward counting system for a transition prompt.	The students sit at a small table together with Ms. Wanna. They used their math manipulatives, and dry erase supplies to play a game and to answer questions. The students clearly know Ms. Wanna and have developed a positive rapport with her. They came into the office space and already knew the routine and expectations.

The following elements of teaching and learning were observed during this lesson:

☐ Learning driven by inquiry	☐ Collaborative learning
☐ A LP attribute was explicitly developed	☐ Differentiated learning
☐ Learning focused on conceptual understanding	☐ Students developed as caring global citizens
☐ Students given agency to guide their learning	☐ Learning explicitly developed an ATL skill

Positive Feedback

- Ms. Wanna started the small group with an important reminder about growth mindset, and asked the students if it was ok to make mistakes. She encouraged deeper thinking by allowing them to discuss the answer to this question and reasons behind their thinking (mistakes help you learn, everyone makes mistakes, etc.). What a beneficial strategy to start a group with students who have low confidence in their math skills and ability. This clearly creates a safe and comfortable setting for them to learn!
- Ms. Wanna asks the students questions and provides ample time for them to complete their work. One of the students took longer to complete their work than the others. Ms. Wanna gave encouraging and reassuring comments.
- Ms. Wanna celebrates with the students when they are proud of their work. The students know Ms. Wanna is there be their teacher and cheerleader with them! 😊 To develop internal motivation and pride, Ms. Wanna could use verbiage like "How proud you must feel for trying your hardest!."

Suggestions for Growth

- If a student has a question, Ms. Wanna could encourage collaborative learning by having a student ask peers or look around to problem solve before directly giving an answer.
- Ms. Wanna could choose at least one learner profile word to develop during the lesson. Kind of like a "lp word of the day." In this lesson, for example, the word risk-taker could have been explicitly discussed and developed during the beginning growth mindset conversation, and referenced throughout the lesson.
