

Teacher: Putri Wanna

Subject/Grade Level: Learning Support, grade 2, writing & task initiation intervention

Observer: Kandace Law

Date and Time of Observation: 26-September-2024, 12:30pm

Teacher Professional Goals: Conduct parent workshops to enhance LS feasibility to the parents and caregivers.

Teacher Observations	Student Observations
Ms. Wanna sits at a small table with her student in a 1:1 pull-out learning environment	The student is sitting at the small table with Ms. Wanna. He is fidgety and often puts his head down on the table. He requires a lot of prompting.

The following elements of teaching and learning were observed during this lesson:

○ Learning driven by inquiry	○ Collaborative learning
○ A LP attribute was explicitly developed	○ Differentiated learning
○ Learning focused on conceptual understanding	○ Students developed as caring global citizens
○ Students given agency to guide their learning	○ Learning explicitly developed an ATL skill

Positive Feedback

- Ms. Wanna begins her intervention time by checking in on the student's zone of regulation. This is an excellent way to promote his self-awareness, and to gauge how to work with the student.
- When the student acts silly and is not following instruction, Ms. Wanna adjusts to provide more structure as needed. For example, the student had difficulty handling a physical visual aid and was poking it hard and repeatedly to answer a question. Ms. Wanna moved the visual aid and asked for him to tell which zone he was in using his voice instead and he was able to answer easily.
- Ms. Wanna reviewed the student's goals and reason for this intervention time. This helps him focus on the task, and helps with internal motivation understanding reasoning.
- Ms. Wanna asks many open-ended questions to deepen the student's understanding, comprehension, and critical thinking. Ms. Wanna is patient to allow the student to respond.
- Ms. Wanna provides many interventions, including choices as able (for example, "which book would you like to read?" Book A or Book B). This allows the student to have ownership in his learning and provides material and content based on his interests.
- Ms. Wanna uses a visual timer so the student knows how much time he will be in the session. She also uses many interventions throughout the intervention time, and pulls from a variety of tools and behaviour management techniques as needed.
- Ms. Wanna builds rapport while also targeting her intervention specific to the student's learning goal.
- When the student had difficulty focusing, Ms. Wanna tried a variety of techniques, including the use of a squishy animal.
- There are a variety of supplies and tools to use in the learning space, so that Ms. Wanna can adjust her intervention easily based on the student's needs and goals.
- Ms. Wanna uses a reward of a 5-minute free play for the student if he puts in effort and tries to focus. During this time, she also focused on relationship building which is so important for her work with students!
- Ms. Wanna focused on a learner profile attribute at the end of her intervention time with her student! She focused on thinking skills today.

Suggestions for Growth

- Ms. Wanna has developed the teaching skills of a seasoned learning support teacher! The only suggestion I have at this time is to share her skills with others! 😊 I'd love for our learning support team to observe her and debrief about her sessions!
